Vaux. 1631.

A Prognostication for the  
yeare of our Lord God: 1631.

*Being the third after the Bis-  
sextile, or Leape-yeare.*

Wherein is declared the state of the  
four Quarters of the yeare, the E-  
clipses, and other things of good  
consequence.

With diuers prettie notes and  
pleasant obseruations fit  
for all sorts of people.

By *Iohn Vaux* of *S. Hel-  
len Awck-land.*

*Scientia nullum habet inimicum praeter ignorantem.*

Divining knowledge hath no greater foe,

Then ignorance, that onely seemes to  
know.

LONDON.

Printed for the Company  
of Stationers,  
1631.

*A true Description of the foure  
Quarters of this yeare, 1631.*

*And first of Winter.*

**VV**Inter (according to Astronomi-  
call computation) began the 12  
of December last 1630. at what time the  
Sunne entred into the first minute of the  
Southerne and Tropicall signe Capri-  
cornus, making the dayes shortest, and the  
nights longest, at which time he began his  
Northerne progresse towards his Aequa-  
tor. This Quarter is of its owne nature  
colde and dry, at which time the earth is  
at rest, and cealet to bring forth, that it  
may gather together againe, and recover  
the lost strength against Summer: from  
whence Winter most commonly bindeth  
the earth, which it warmerh and covereth  
with snow as with a garment, and refresh-  
eth it with store of raine: For snow and ice  
are comfortable to corue, and fruite, and  
bringeth plenty of all things. And after  
the Sunne hath accomplished his last de-

## A Prognostication.

grees vnder Aquarius and Pisces, he openeth the earth with new and pleasant gales of winde, and prepareth the Spring time: and this is the generall and proper temperament of every Quarter of the yeare, which is alwayes to be considered in Meteorologie, lest that we speake of flowers in Winter, and of Ice in Summer.

The diseases incident vnto this Quarter, are such as accompany old age or dotage: viz. the Gout, Sciatica, trembling of the joynts, bleare-eyes, the Cough, the Stone and Strangury, the Crampe, Palsie, the shrinking of the sinewes, Dropsies, and all colde diseases that come by want of blood.

### *Of the Spring.*

**T**He Spring beginneth at the Sunnes entrance into the first minute of Aries, making then the dayes and nights of an equall length throughout the world, which shall be this yeare the 10 of March. This Quarter is by nature hot and moyst: For then the Sunne is both come neerer vnto his verticall point, and also to starres of a hotter nature, causing thereby the drier windes to blow; of which is Subsolianus and Favonius, called the west winds, where.

Vaux. 1631.

wherewith superfluous humours are wasted and consumed, the seed conveniently sowne, and the ground stirred and made fit to bring forth; which setteth forward trees, vines, flowers, and leaues, and bedecketh the earth with grasse and hearbs. But because the new and tender corne lately sprung vp requireth moystning shewers, there ariseth in the morning with the Sun *Pleiades*, *Hyades*, & *Orion*, & in the evening *Arcturus*, tempestuous and moist stars, which stir vp raine and moist winds. At the length the Sunne (comming to Gemini) moveth a convenient and temperate heate to the former seed time.

The diseases of this Quarter are such as are incident vnto infancy, which be these that follow, viz. the small poxe, meafells, squinancy, morbus Regius, shingles, ring-wormes, or tetters, Saint *Antonies* fire, the waterjaggs, frosgan, scabbs, itchings, the fellon, pushes, inflammations, hot agues, and such like.

*Of Summer.*

**S**ummer beginneth at the Suns ingresse into the first minute of the Northerne and Tropicall signe Cancer, which will be the 11 of Iune. This Quarter is by nature

## A Prognostication.

hot and dry, at whose beginneth there ariseth Prosepe, Aselli, and other fixed stars of a moistning vertue, from whence by the Sunnes accesse is stirred up raine to bring forward corne and other fruite. But after that the things growing from the earth have attained a just increate, and by heat waxeth toward maturation and ripenesse, the Sunne approaching the hot signe Leo, there ariseth Syrius and Procion, which are stars of a hot constellation: therefore great heate is stirred up, to the tempering whereof the Etesian windes blow in the day time. Afterward the Sun comming to Virgo, the said heate is mitigated by little and little, and at the rising of Arcturus it bringeth raine.

The diseases of this Quarter be collicks, rising of the spleene, leprosie, pimples in the face, obstructions, feavers of blood, apostumes, iaudies, plurisies, Ritches, inflammations, and such as proceede of a dust choller and distemper of blood.

### *Autumne, or Harvest.*

**A**utumne beginneth the 14 of September, when the Sunne entreth into the first minute of the Equinoctial sign Libra, making then the nights equal with the

Vaux. 1631.

the dayes. This Quarter is by naturè cold and dry: For the heate cealeth with the Summer passed. And although plentifull shewes doe then fall, so that the vintage is then abundant, and the winter seede-time made more commodious: yet notwithstanding the remaining heate of the ayre which by the Sunnes accesse to hot starres in Sagittarius is somewhat increased, and the moysture of the earth drawn vp, and the ground cherished and prepared for the winter following, lest colde comming of a sodaine, might hurt the seede and winter corne.

The diseases of this Quarter are crudities, and rawnesse of the stomacke, surferings, paines in the backe, darknesse in the sight, Vertigo, or turnings of the braine, head-ach, retention of the Vrine, canker, fistulaes, emeroyds, the stone and strangury, rooth-ach, with impediments in the eyes, and such like.

**H**AVING now spoken something of the foure Quarters of the yeare, I hope it will not be amisse (vnder favour) to speak somewhat of the foure Quarter Sessions of the yeare: to the end that he that can but

## A Prognostication.

reade,(and being any way tyed to the attendance of the Quarterly sitting of the Iustices) may hereby know their severall beginnings, without expecting any further warning thereof. And now to begin with the course of the yeare and place, Michaelmas Sessions the last.

The Statute made in the second yeare of King *Henry* the fift, and the fourth chapter thereof, saith: Over all the Realme the Sessions shall be:

In the first week after { *The Epiphany or Twelfth day.*  
                          *The clause of Easter or Low-*  
                          *Sunday.*  
                          *The Translation of St. Thomas*  
                          *the Martyr, which is always*  
                          *the 7 day of Iuly.*  
                          *St. Michael the Archangel.*

*Seven dayes thou shalt keepe a solemne feast unto the Lord thy God. Deut. 16. 15.*

Whereby it seemes that the Octaves of every severall feast would bee past before any thing be done, because it is the clause or conclusion of the feast.

Vaux. 1631.

*Of the County or Moneth-Court.*

**N**O County from henceforth shall be holden, but from moneth to moneth; and where greater time hath beene vsed, it shall be kept so still: *Magna Charta. cap. 35.* And afterward in the time of King Edward the sixth, this *Maior terminus* was restrained to a moneth only, as followeth:

No County Court, or Courts hereafter to be kept within this Realme, shall be longer deferred, but one moneth from Court to Court, and so the said Courts from henceforth shall be kept every moneth, and none otherwise; any usage, custome, Statute, or law heretofore had or made to the contrary in any wise notwithstanding: *2 Edw 6. cap. 25.*

The necessity of keeping this Court every moneth, and upon a day certaine, is by reason of the Kings writs of Exigents, which must bee read there. But when the lawes are observed according to the true intent thereof, it will be a golden world.

*Starre-Chamber dayes.*

**VV** Ednesday and friday throughout

### A Prognostication?

out every Terme-time are Star-chamber  
dayes.

Note also, that if any terme end not  
vpon a wednesday or friday, then, the next  
wednesday or friday after the ending of  
the Terme is a Starre chamber day.

But if a holy day fall vpon a wednes-  
day or friday in the Terme time, then the  
Starre-chamber day is kept vpon the holy  
Eue.

### *Of the Eclipses of this yeare. 1631.*

**T**Here will be foure Eclipses of the two  
Lights this yeare; two of the Sunne,  
and two of the Moone. Both those of the  
Moone will be seene with us in England,  
but those of the Sunne shall not.

An Eclipse of the Moone in winter is  
cold and dry signes betokeneth great cold  
and freezing in the earth, aire and water.  
In watery signes it betokeneth plentie of  
raine and water. And in airy signes it be-  
tokeneth winde and tempest. And in fiery  
signes it betokeneth faire weather.

If the Moone be in any signe with the  
Dragons taile, and the Sunne with the  
head of the Dragon in the signe opposite,  
then

then happeneth an Eclipse of the Moone.

And againe, if the Sunne be with the tayle of the Dragon in any signe, and the Moone with the Dragons head in the signe opposite, then likewise shall happen an Eclipse of the Moone.

And if she be in the same degree, the Eclipse shall be generall; And so she must be in the head, or taile in the same degree, or within 12 degrees, if the Eclipse fall. And so in every coniunction or change the Sunne and Moone must be in the same signe, degree, minute and second.

*Of the moving of the Planets.*

**S** *Atmrue* abideth in every signe 30 moneths.

*Iupiter* abideth in every signe one year.

*Mars* abideth in every signe 60 dayes, and 16 houres.

The Sunne abideth in every signe 30 dayes, 10 houres, and a halfe.

*Venus* abideth in every signe 29 dayes, and endeth her course in 348 dayes.

*Mercury* abideth in every signe 28 dayes and 6 houres, and endeth his course in 338 dayes.

The

## A Prögnostication.

The Moone abideth in every signetwo dayes , and a halfe, and almost 6 houres, and endeth her course from point to point in 27 dayes and 8 houres.

To each of the five planets is assigned 3 circles, that is to say ; *Equans*, *differens*, and *Epiciclus*. There is also in these circles three manner of motions, viz : *Motus directus*, *Stationarius*, and *Retrogradus*. *Motus directus* is even forward according to the Succession of the signes, and in the over part of the circle called *Epiciclus*. *Motus Stationarius* is in the middle of the circle *Epiciclus*, when a Planet seemeth to moue neither vpward nor downeward, backward nor forward. *Motus Retrogradus* is backward, when a Planet moveth contrary to the Succession of the signes, and in the nether part of the circle called *Epiciclus*

*Saturnus* hath that name of *Saturando*, making fulnesse and plency. *Saturne* grieveth more, and doth more hurt when he is retrograde, then when he is direct.

*Iupiter* is the Lord and giver of substance, and he is called father of the gods or Planets.

*Mercurius*, *quasi medius currens*, as running in the middle betweene *Venus* and the

the Moone. *Mercury* is alwayes either one signe before the Sunne, or one signe behinde him.

*Sol, quasi solus lucens*, alone shining, the well of light. All the rest of the Planets receive light of the Sunne, as a glasse set before a candle receiveth light of the candle.

The Moone is called the fairenesse of the night, mother of all humours, Lady of the Sea, measure of times, follower of the Sunne, and changer of times.

### *Of Houres.*

**A**N houre is no other thing than the 24 part of a day. And it is so called of the Greeke word *oura*, which in Latine is *tempus*.

The planetary and temporall vnequall houres, or comprehended by an vnequall number are called masculine: even or equall houres are called feminine.

The Astrologians call those houres combust, which are taken after the conjunction of the two lights: and in these houres an Astrologian doth not expedite or take in hand any busines.

Cano-

## A Prognostication:

Canonicall houres are those which are addicted to diuine prayers, also they suffer by themselves some partition of the time and day.

And of those diuisions there are seven: viz. *Matutina*, *Prima*, *Tertia*, *Sexta*, *Nona*, *Vespertina* et *Complectoria*.

*Matutina*, is the dawning of the day, *Mat. 20. 1. & 28. 1.*

*Prima*, is the houre of Sunne-rising.

*Tertia*, is Nine of the clocke in the forenoone, *Mat. 20. verse 3.*

*Sexta*, is twelue of the clocke, called high noone. *Luke 23. 44.*

*Nona*, is three of the clocke in the afternoone. *Acts 3. 1.*

*Vespertina*, is the houre of Sunne set.

*Complectoria*, is the houre of Twilight.

At which time in some places, they vse to ring a bell for the space of an houre, by the sound whereof all travellers and strangers may draw to the towne, and not wander out of their way.

### *The Quadrants of an houre.*

**A**N houre is diuided into foure Quadrants or quarters, and every quarter containeth 15 minutes: so that the whole houre is diuided into 60 minutes. A

A minute is the sixtie part of an houre;  
and it is so called of the verbe *minuo*, be-  
cause by little and little it diminisheth the  
houre.

A minute is divided into 60 seconds:  
and every second into 60 thirds, and so  
vnto an infinite number by a Sexagenary  
division.

*Descripti hic breviter cunctis cūpartibus annū  
Vnde patet, celeri quod cursu labitur ævum;  
Et veluti rapido semper pede transvolat ætas:  
Sic hominū quoq; vita fugit, nec fixa manebit:  
Ergo summe Pater me æterna ad secula serva,  
Nā nihil hac vita est, nisi aura laborq; perennis*

Here followeth a Table,  
plainely explaining the Act a-  
gainst Usurie, 21. Jacobi, cap. 17.

Anno Dom. 1624. It was enacted  
that no man should take for his  
money above eight pounds in the  
hundreth for a whole yeare:

That is to say, for every five

Crownes two shillings,

&c. As in the Table

following.

*Principal.*

# A Prognostication.

<i>Principall.</i>	<i>℥</i>	<i>℥</i>	<i>Interest</i>	<i>℥</i>	<i>℥</i>

385 Crownes is	96	5	Interest	7	14
390 Crownes is	97	10	Interest	7	16
395 Crownes is	98	15	Interest	7	18
400 Crownes is	100	0	Interest	8	0

And will yeeld according, &c.

**T**His Act being made to continue for seven yeeres from the feast of Saint Iohn Baptist Anno Dom. 1625. and so to the end of the first Session of Parliament then next following, was *Anno 3. Car. Cap. 4.* made perpetuall.

This last Table increasing from five Crowns, to 400. which makes 100. pound is easie enough without any familiar example. Because you have at the end of any broken or whole summe under 100. pound, the iust interest placed directly against it.

And there is no man that can rightly compute it otherwise. For you cannot reckon it iustly by the rate of even pounds  
but

but either your account will exceede or come short. For if you shall take 19  $\text{d}$  the pound, it will come five groats short of 8 in the 100. And if you shall take 19  $\text{d}$  farthing for the pound, it will come to eight pound 5  $\text{d}$  for 100 pound, and so exceed. But for more ease doe thus: Divide your 100 pound into eighr equall parts, (because it is rated at 8 in the 100) and it will be 8 times 12  $\text{p}$  10  $\text{s}$ . For which (according to the Statute) you giue or take 8 times 20  $\text{s}$ , which is 8  $\text{p}$ . Againe, subdivide 12  $\text{p}$  10  $\text{s}$  into 20 equall portions, (because you would know for how much you must giue or take 12  $\text{d}$ ) and it will come iust to 20 times 12  $\text{d}$ , for which you giue or take 20 times 12  $\text{s}$  6  $\text{d}$ . which is 20  $\text{s}$ . Now, double 12  $\text{s}$  6  $\text{d}$  and it will make 5 crownes which is 25  $\text{s}$ . for which you giue or take 2  $\text{s}$  in the yeare, &c. as in the former Table.

When money was lent for 10 in the 100. the borrower paid for foure Crownes two shillings. But now being rated at 8  $\text{p}$  for 100  $\text{p}$  it is five Crownes for two shillings for a whole yeare.

## A Prognostication.

*A perfect rule whereby to finde the Golden number for ever without a .y addition.*

**F** Rom the yeare of our Lord propounded, deduct 1500. and divide the rest by 19. and that which remaineth is your desire: But if nothing remaine, so that the division be quail, 19 shall be the golden number of the yeare proposed.

### *Example.*

In this yeare of our Lord 1631. I desire to know the golden number: wherefore I substract 1500. and I divide 131. which remaineth by 19. and there resteth 17 for the golden number for this yeare: And this is the readiest way to worke by:

---

*Here followeth a new devised Table, whereby to know the Epact for the English or forraign computation for ever; by two Article numbers framed for that purpose, and placed directly over the golden numbers; serving for any yeare past, present, or to come.*

Article

# Vaux 1631.

Article numbers for the English account. | 10 | 20 | 0

Article numbers for the forraigne account | 0 | 10 | 20

*The use of this Table is thus.*

**F**irst finde in the Table, the Golden number for the yeare proposed, and adde vnto it, the article number, which is placed directly over it, & those two numbers so added together (if they doe not exceed 30) is the Epact of the yeare desired. But if they doe exceed 30. the overplus is the Epact of the yeare which you seeke for.

*Example.*

I would know the Epact for this yeare of our Lord 1631: the first of *March*. Wherefore by the rule before taught, I find the Golden number to be 17; wherewith I enter this table, and I find directly placed over the head thereof for this Computation, the article number 20: which beeing aded vnto the Golden number, maketh 37. wherfore I conclude that the latter figure 7. being the overplus of 30, is the Epact for this yeare. The same order must bee observed with the article numbers of the forraigne computation.

C 3

*How*

The golden numbers	1	2	3
	4	5	6
	7	8	9
	10	11	12
	13	14	15
	16	17	18
	19	0	0

## A Prognostication.

*How to find the change of the Moone  
by the Epact.*

**A**dde to the Epact the number of monthes from *March* to the proposed month, including the said month of *March*: then take that number from 30: if the moneth wherein you desire to know the change haue 31 dayes in it, or if the moneth haue but 30 dayes, then take it out of 29. and you shall haue the day of the change remayning. But if in case the Epact, and the number of the moneths so added exceed 30: take away 30 as oft as you can, and that which remayneth deduct out of 30, then looke what number is left of 30, and that sheweth the day of the Moneth when the Moone chaungeth.

### *Example.*

I would know when the Moone chaungeth in *September* 1631. the Epact is 7. and from *March* to *September* is 7. which are both in number 14. which being taken out of 29, (because *September* hath 30 dayes) there remaineth 15. which is the day whereon the Moone chaungeth.

A true Catalogue of the  
names of the Bishops and their  
severall Bishopricks in *England* and  
Dominion of *Wales*, according  
to their places in the Par-  
liament House.

**G**orge Abbot Archbishop of *Canterbury*  
Samuel Harsnet Archbishop of *Yorke*.

*William Laud* Bishop of *London*.

*John Housen* Bishop of *Durham*.

*Richard Neale* Bishop of *Winchester*.

*Thomas Dove* Bishop of *Peterborough*.

*Francis Goodwin* Bishop of *Hereford*.
